Bolted Rack Technology

Interlake Mecalux, a leader in rack system technology for over 50 years, introduced bolted rack systems to the market. This storage system incorporates top quality components and meticulous engineering, designed to ensure the highest level of structural integrity.

The modular bolted system offers more creative, custom, fast and efficient solutions. All beams and accessories used by this system are compatible with traditional systems, such as Selective, Drive-In, Push-Back, Pallet Flow and Pick Modules. A recessed channel in the column's shape keeps all bolts and nuts safely away from products and people, preventing unwanted contact.

Other key features in Interlake's bolted rack technology include: bolts are Grade 5 zinc plated, nuts have a serrated flange to create a positive engagement with the steel column to remain securely fastened after installation, and thread designs prevent over-tightening of the bolt connection.

Advantages of Bolted Systems Include:

- *Safety and versatility:* racks have flexible configuration and easy to modify
- *Greater storage space:* modular design allows the storage of up to 6.3X more product in the same space
- *Easy to assemble and repair*
- *Up to 60% savings in transportation costs:* The savings in transportation surpass the additional costs of installation

For more information on Interlake's bolted rack systems, contact Alan Carey, Vice President of Sales, at 443-561-3021 or email info@conveyorhandling.com.
